Contemporary Copper and Stone Designs

Copper Wall Features

Hand crafted from volcanic stone and copper panelling, our walls are our signature features. Perfect for any garden wall or patio, the beautiful hand pressed copper is available in a range of designs and finishes - we can even create custom designs to suit your unique style. Lighting is a highly recommended add on to create ambience within your landscape.

Large Sunset Wall

Tower Features

Our tower features come as single, double or triple towers. They also come in textured or grooved stone finishes for a more natural look. Most of our copper designs can be used on our towers - each product is made by hand according to your design choices. Also available is our Giant Triple Tower - a statement piece that is sure to impress.

Our custom fibreglass ponds are custom made to order:

On site installation: the fibreglass is sprayed directly onto a concrete/block work structure pre-built by you on site.

OR

Drop in pond: drop in ponds are made to order and are manufactured off site.

Ask us about which option is best for your project!

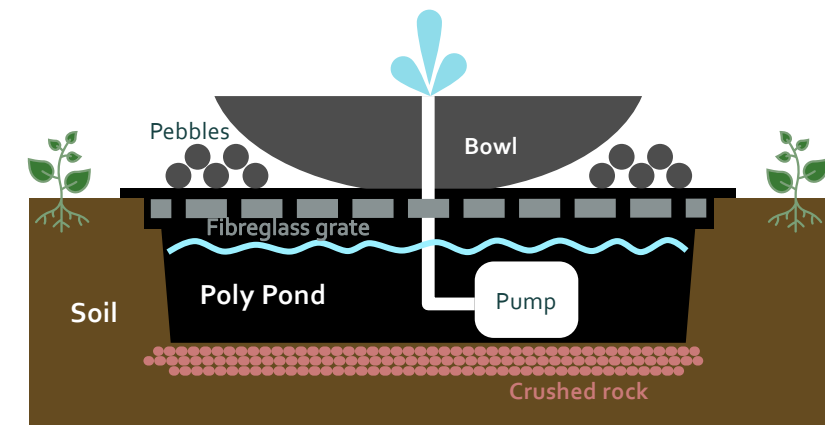

Shallow Bowl
in custom pond

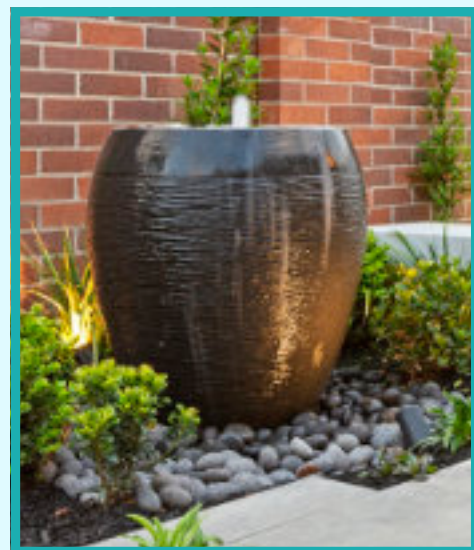

Installation

The below guides illustrate how different types of packages can be installed - ask our staff for more information and advice.

BELOW GROUND POND INSTALLATION

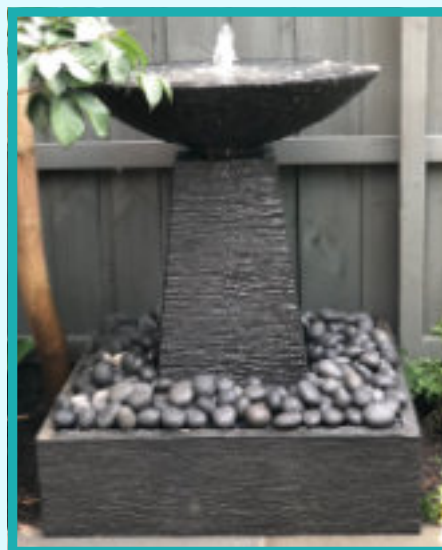

- The pond is hidden below ground level by pebbles
- Before installation, the ground must be excavated and crushed rock added to support the base of the polyurethane pond

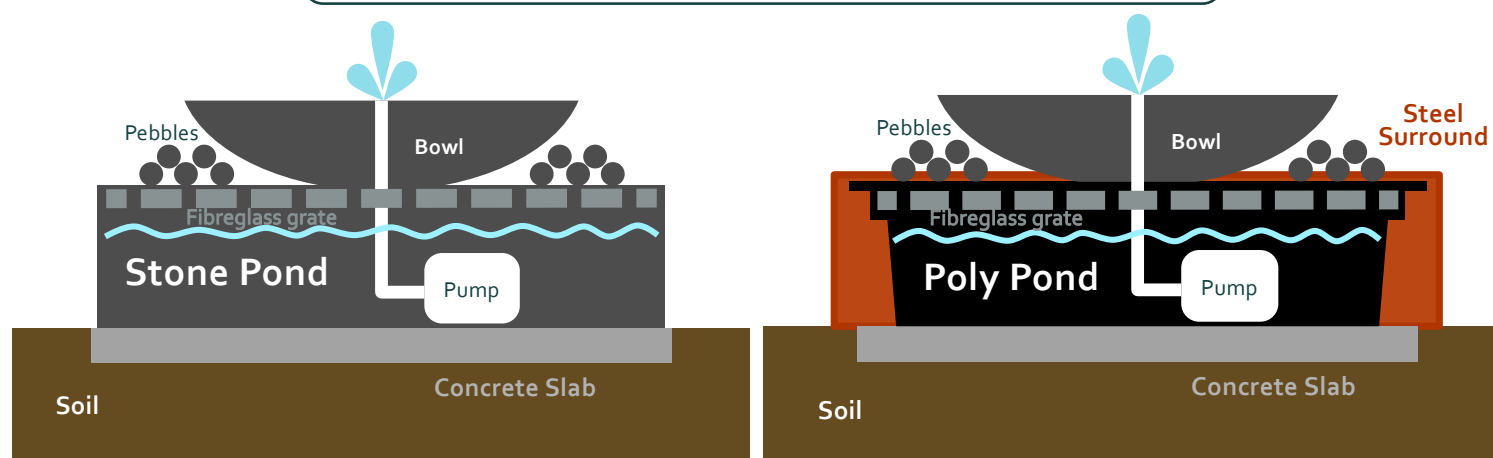

Below ground installation of a Gentong feature package with poly pond

Above ground installation of a Shallow Bowl and Medium Stand feature package with a stone pond

ABOVE GROUND POND INSTALLATION

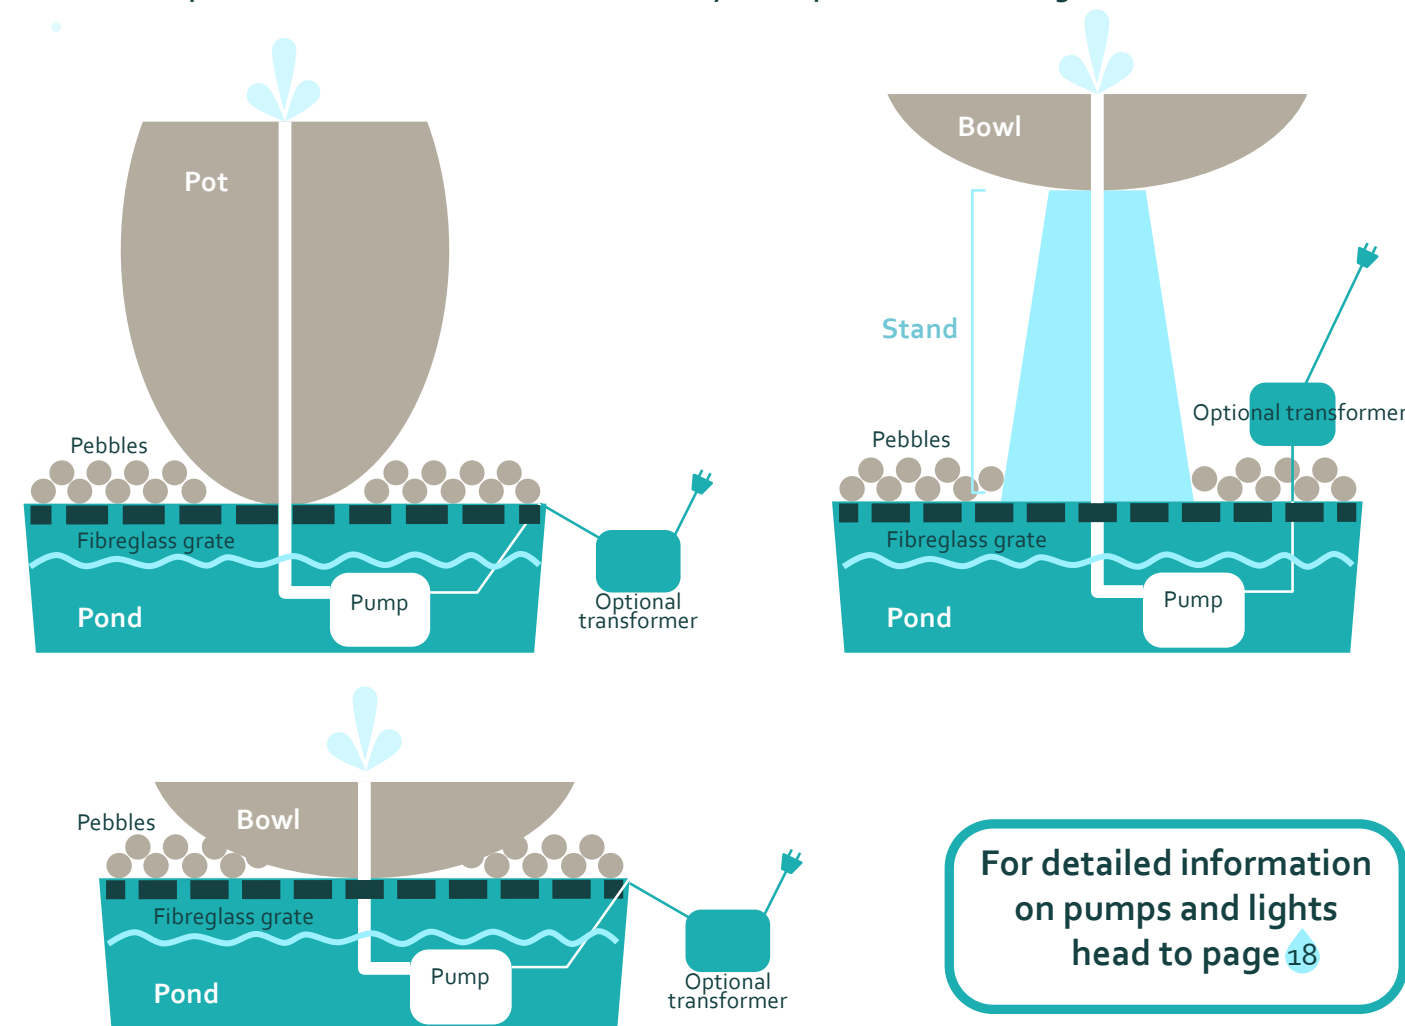

- The pond is visible above ground
- The pond must sit on a solid base such as a concrete slab, paving, or decking
- If you are using a polyurethane pond it can be hidden by a steel surround, either corten or powdercoated

Ball feature package with corten steel surround

How our feature packages work:

The bowl or pot sits on top of a fibreglass grate -> the pump draws water from the pond -> the water then flows through the pipes to the top of the feature, flowing down the feature -> water returns to the pond to be recirculated. This continuous cycle keeps the water moving and clean.

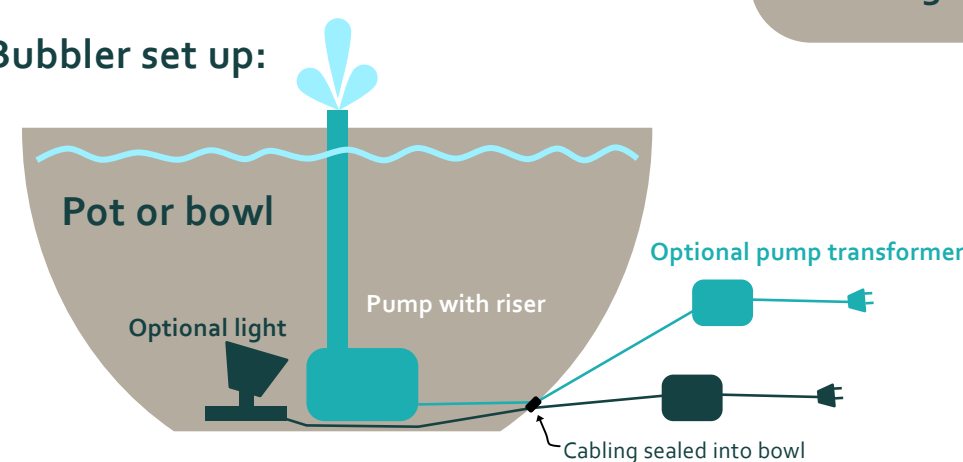

For detailed information on pumps and lights head to page 18

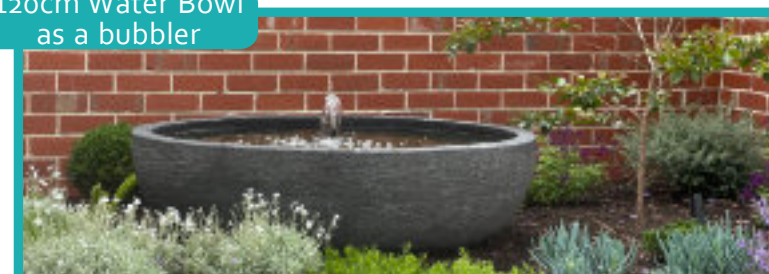

Bubbler Features

Most pots and bowls in our range can be made into a simple yet effective bubbler feature by adding a pump. You can also add a light for that extra wow factor.

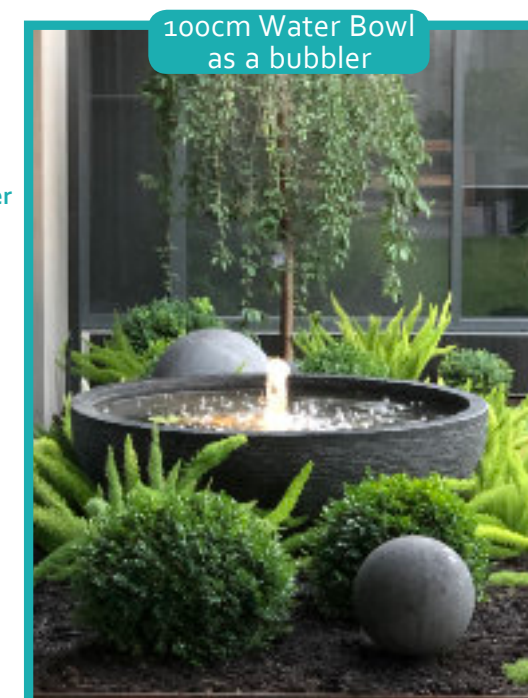

Bubbler set up:

Stainless steel

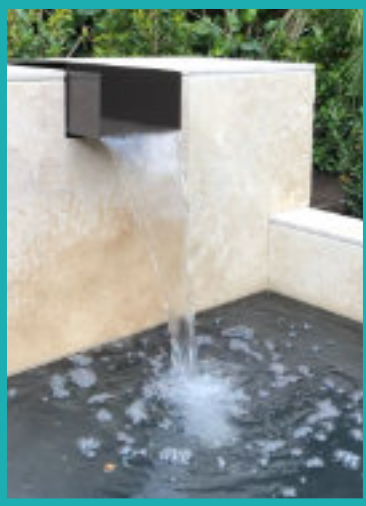

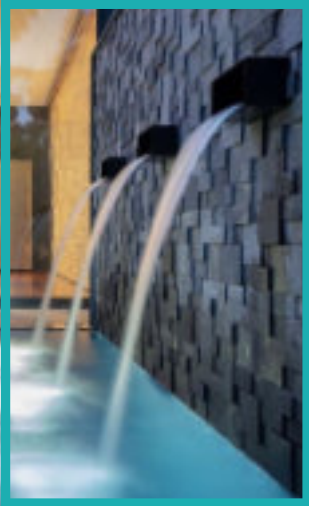

We stock and manufacture a variety of stainless steel water feature products.

With a large range of standard sizes or the ability to create custom items to dimensions and colour of your choosing, the possibilities are endless!

- Spouts
- Shutes
- Descents
- Ponds
- and more!

Ask us today about what we can make for your custom project!

Shutes

Stainless steel shutes can be added to our bowls to create a lovely spill over effect - perfect for ponds or pools.

Shute sizes:

- 100mmx100mm - suits 80cm bowls
- 100mmx150mm - suits 80cm - 120cm bowls
- 200mm curved - suits 100cm - 140cm bowls
- 250mm curved - suits 120cm - 140cm bowls
- 500mm curved - suits 180cm bowls

Our stainless steel spouts are available in a wide range of shapes and sizes can be set into a wall or stand alone to create dazzling pool or pond features.

Standard spout sizes:

- 75mm x 100mm
- 100mm x 100mm
- 100mm x 200mm
- 200mm x 200mm
- 250mm x 250mm
- round 100mm diameter

These spout sizes are available off the shelf. They are designed to be set into a wall - all are 300mm in length, and come with rear entry inlets.

Custom spouts:

Looking for something more specific? We can create your perfect spout to dimensions of your choice - contact us today to find out more!

Spouts

Block Spout

Our L shaped 'Block' spouts come in 2 standard sizes to suit our range of bowls, and we can also make similar free standing spouts to custom dimensions.

Spout inlet options:

standard size is Ø 19mm

Rear entry inlet

Bottom entry inlet

Descents

Create a dramatic waterfall effect with our range of stainless steel waterfall descents - the perfect finishing touch on your pool or custom pond project.

Waterfall descent options

Rear entry inlet

Bottom entry inlet

Projecting:
The water spills away from the wall

Cascading:
The water spills down touching the wall

Standard descent sizes:

The following descent sizes are available off the shelf. They are designed to be set into a wall - all come with rear entry inlets.

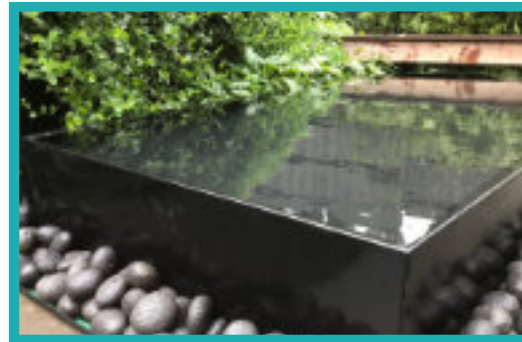

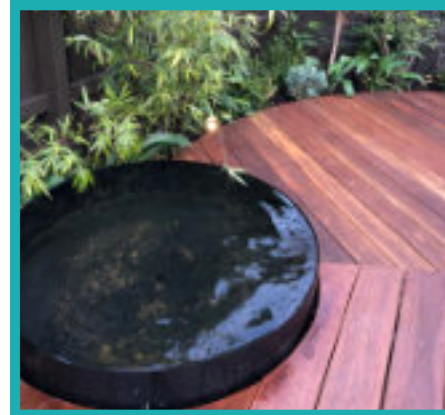

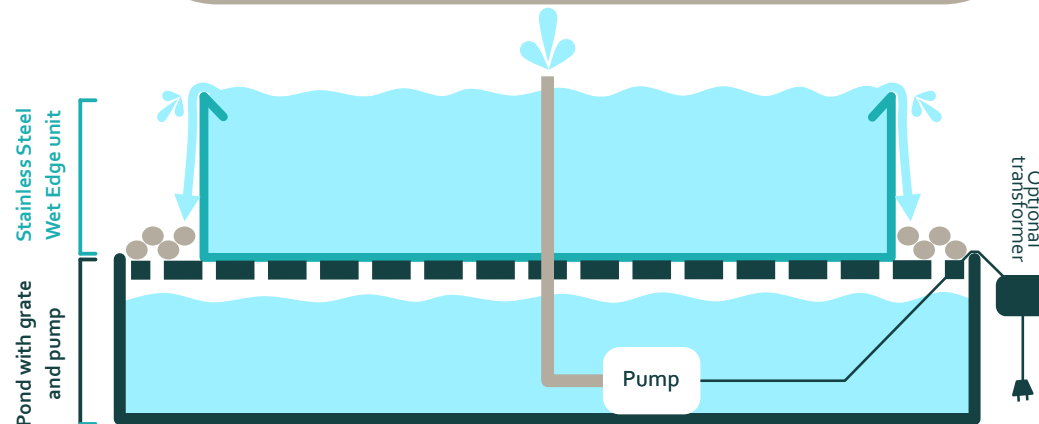

- 300mm length
- 600mm length
- 900mm length
- 1225mm length
- 1500mm length

Custom sizes and bottom entry inlets can be made upon request.

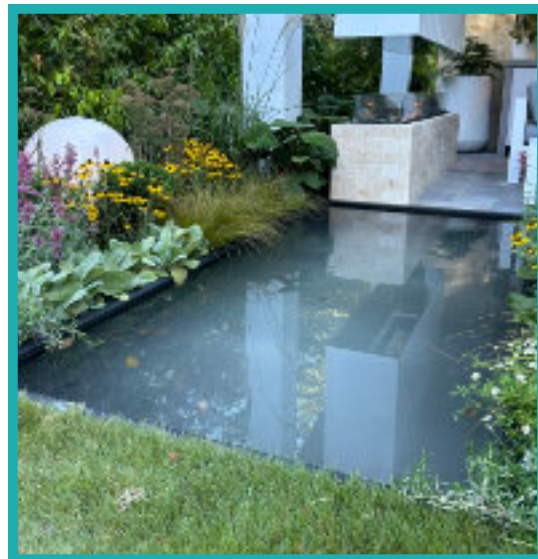

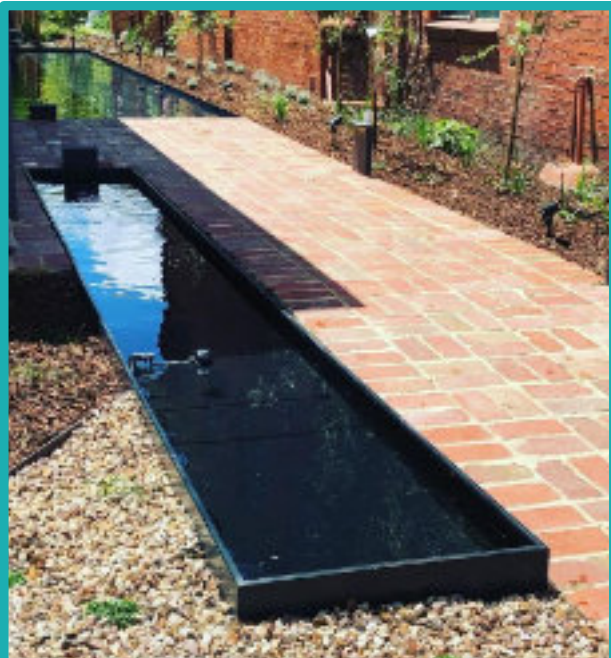

Wet edges

Our wet edge features are designed to capture the movement of water as it flows over a stainless steel edge. The water is gravity fed into the pond below and recirculated. They can be made custom to dimensions and a shape of your choosing.

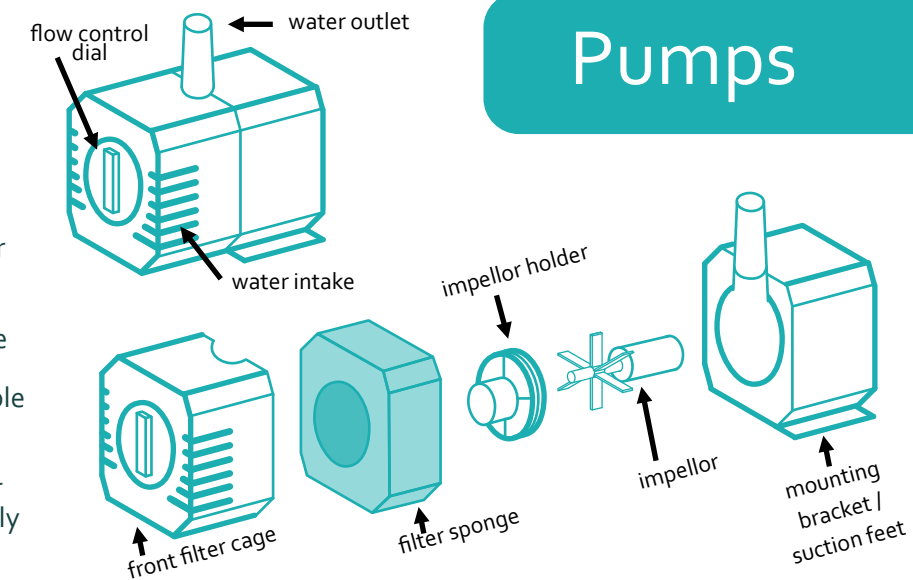

Reflective ponds

Reflective ponds create a calm, mirror like surface that reflects your surrounding environment. Bubbler or spouts can also be added to create gentle movement in the pond.

Pumps

- Pumps: move water around the feature. Water effects are achieved by changing water flow and pressure. Most pumps come with an adjustable flow control.
- The more water flow/movement there is, the cleaner your feature will stay. Pumps require regular maintenance to ensure longevity and performance. Pumps can be taken apart easily for cleaning.
- The size of the pump required will vary on the size of the pond and water feature. Pumps are sized according to litres per hour. Pumps are submersible and include a sponge filter.
- Filtration systems: keep the water clean and clear and we can recommend various options - generally only suitable for larger features.

240V

240V pumps are ideal when your power outlet is nearby to the water feature - no more than a few metres away.

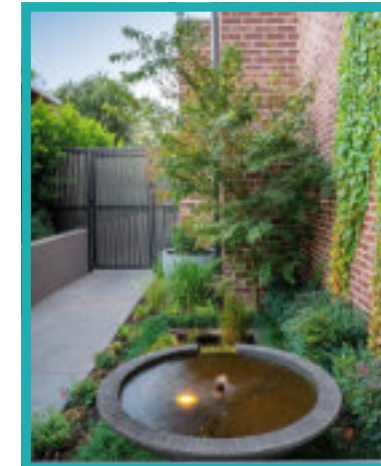

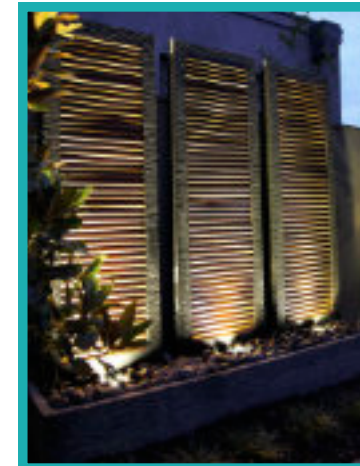

Low voltage with transformer

Low voltage pumps with transformers are a safer option for running cabling more than a few metres outdoors - perfect for when your existing power outlet is not nearby to your water feature.

A good choice for if you want to run your cabling through conduit.

Lights

Lighting can be added to any of our features and is highly recommend to create a beautiful effect at night time. All light options are water submersible and must be paired with a transformer.
